$ cd ..
$ ls
bin  boot  dev  etc  home  lib  lib64  media  mnt  opt  proc  run  sbin  sys  tmp  usr  user2  usr  var
$ cd user1

```

[illegible]

If you look closer you'll notice `{not_the_flag}{user2: string}`. Now its pretty safe to assume that this string is the password for user2. So now, if we try to ssh into user2 using the password, it works!

Now we notice 5 files under user2 and after playing around a bit, you'll notice that the files are almost the same. So we check that using the diff command and notice that the first 4 files are the same but the last one isn't. The differing text is the flag.

```
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.
